South Monroe Historic District Tree Survey 2001

Summary

This survey was completed on December 31, 2001. Data collection, data entry, tagging and mapping was performed by Fred Warner on behalf of Woolpert LLP as contracted by the City Of Monroe, North Carolina.

A total of 383 trees of 20 species were recorded. Trees of the genus *ulmus* were indicated as *Species*. No further identification of species was attempted.

The following is a list of the trees by frequency of appearance:

Willow Oak	146
Pecan	64
Post Oak	52
White Oak	38
Southern Red Oak	24
Elm	13
Southern Magnolia	8
Red Maple	6
Walnut	6
Red Oak	5
Loblolly Pine	4
Deodar Cedar	3
Southern Catalpa	3
Water Oak	3
Ginko	2
Hackberry	2
Cottonwood	1
Pin Oak	1
Red Mulberry	1
Silver Maple	1

All trees were scouted for obvious, immediate and potential hazards. Nine priority level 1 trees and thirty priority 2 trees were recorded. These trees should receive immediate attention or further evaluation as indicated on record. Having been designated as priority levels 3 and 4 does not preclude the remaining trees from failure or from any other hazards associated with trees in an urban environment.

It was observed that many, if not most, of the trees sustained damage from the ice storm of January 2000. Some of these trees were damaged heavily. It is recognized that in such instances, normally incorrect pruning practices are unavoidable. It should be further recognized that these trees will incur the same problems associated with other incorrectly pruned or "topped" trees.

The overall condition of the surveyed trees is fair. With 25% of the surveyed trees in the poor or very poor condition rating, it is considered that a combination of aging and storm damage is contributing to a decline of the forest. A more complete evaluation of the forest, including the younger trees not included in this survey, would be necessary to determine the rate of decline and the appropriate measures needed to offset that condition.

It is perceived that with immediate attention given to priority level 1 and 2 trees and appropriate care given to the remaining trees, the South Monroe Historic District's urban forest will be sustained for many years with a reasonable level of safety and canopy health. A tree replacement plan can also enhance a sound maintenance program.
